Why Go CoLo?

Colocation services give your business enterprise-level infrastructure without the cost, risk or hassle of running your own data center. You get secure, high-performance facilities designed to protect your critical systems and keep you connected—so you can focus on what you do best. From cost savings to scalability, colocation is the smarter way to grow.

1 Avoid the massive capital investment of building and maintaining a private data center. With colocation, you're paying for only the resources you need while gaining acess to enterprise-grade infrastructure.

2 Your data is protected by multi-layer physical security, redundant power systems advanced fire suppression and climate controls. Plus 24/7 monitoring and backup systems keep you online, even during outages.

3 Reduce your carbon footprint with energy-efficient systems, shared resources and optimized cooling. Colocation facilities are designed to maximize performance and minimizing environmental impact.

4 Easily adjust your space, power and bandwidth as your needs change. Whether you're adding servers or expanding to new markets, colocation grows with you, without delays or costs of expanding your own facility.
